

Joseph (Joe) Jankowski (7/16/23)

I worked at COMSAT Labs from 1973 through 1978. During that time I was aware that the Labs was working on or had developed the following technologies:

SPADE and SCPC

TDMA and SSTDMA

Echo cancellers (this technology was the basis for noise cancelling devices)

The Torus antenna employing multiple feeds to communicate with several satellites in the geostationary arc

Nickel Hydrogen batteries
